

# OpenClaw Machines

## The Boring Infrastructure, Done Right.

Managed hosting for OpenClaw AI agents — Easy setup with one-click and CLI scripting, sandboxed environments, authentication, backups and upgrades, browser automation, managed credentials, LLM keys and more.

### THE PROBLEM

OpenClaw is powerful but getting it configured out of the box is hard and error-prone. Memory tuning, sub-agent orchestration, credential management, browser setup, persistent storage — each requires deep knowledge of the system and hours of trial and error. Most users never get past the initial configuration. Our opinionated, production-tested setup eliminates that learning curve: sensible defaults, managed infrastructure, and one-click deployment so you can focus on what your agents do, not how they run.

### MULTI-AGENT & MULTI-USER

Go beyond a single agent. Scale your setup to multi-agent squads with the right level of orchestration — each agent with its own role, model, and tools. Invite your team to the platform with role-based access and shared workspaces, so everyone can build, manage, and monitor agents together.

### PRICING

#### Standard

**\$20**/mo **\$15**/mo billed yearly

For personal productivity and automation — research agents, email automation, scheduling, data collection, and workflow orchestration.

#### Developer

**\$50**/mo **\$40**/mo billed yearly

Larger instance to support developer workflows. Also includes integration with dedicated Browser Automation VMs running Chromium.

*All instances include managed backups.*
